Subject: JPSG questions for written answer on Facial recognition

Dear Sirs,

I have the following questions to Europol:

a) Does Europol use software to recognize faces in video recordings?
b) Who provides the software and what is its name?
c) What is the rate of false positives and false negatives of this software?
d) How many people (targets) were sought in this way in 2018, and how
many of those people were matched?
e) What video material has the software been used on?

Yours sincerely
Patrick Breyer
